WHAT YOU GET

Your forecast, built with your numbers.

What's in your forecast

- Your 13-week cash flow forecast in Excel, set up with your own numbers. It also opens in Google Sheets.
- Weekly cash in by channel, timed to each platform's payout delay.
- Cash out week by week: inventory orders as a deposit and a balance, ad spend, payroll and fixed costs.
- Your lowest cash week and how deep it goes, all on one dashboard.
- Order timing what-ifs side by side, in the Standard and Premium packages.

Every package also includes a one-page summary of what the numbers show and a short guide to keep the forecast current.

Built by a finance leader with consumer-goods and e-commerce experience. AI tools do most of the build, working from your files; every formula is tested and every number is checked before delivery.

How an order works

1. You answer a few questions and send your sales exports or a summary.
2. I build and test the model: every formula checked, blank and extreme inputs tried.
3. You get the file, the summary and the guide.

What to send

- What you sell, your channels and how often each pays you out
- Sales by channel for the last 13 weeks or 3 months
- Your opening cash and the date week 1 starts
- Upcoming inventory orders: amount, deposit date, balance date
- Monthly fixed costs: payroll, rent, software, loan payments
- Excel, Google Sheets or both

Exports or a summary are enough. Never send logins or passwords, and please remove customer names, emails and addresses.
